

	Codes <i>GC-1 = Handling procedural activities</i> <i>GC-2 =Navigating common domains</i>					
Respondent ID	Participant No.	Responses	Short-Comments	Labels	GC-1	GC-2
110019533756	P1	It's great with using React and other mainstream JavaScript tools. At one point it pointed me to an API that was not in the official documentation but still worked perfectly	React/mainstream JS; pointed to undocumented API	GC-2	0	1
110019505086	P3	AI has mainly helped me to fast track my process so I'm glad everyday. There are issues like hallucination, extra debugging but I find that these can be resolved if you prompt properly	Fast-tracks workflow despite occasional rework- NO SOURCE		0	0
110019432168	P6	Working around outdated/updated APIs in a legacy project with a language I did not know well	legacy project; language not known well	GC-2	0	1
110019427134	P7	Anything like "give me code to build a backend for such and such"		GC-1	1	0
110019425850	P8	Most often than not, I was glad that I used. Particularly in the new software domain that I ain't equipped with. It works great for beginners.	new software domain / beginners' ramp-up	GC-2	0	1
110019424217	P10	Yes, to understand the project code	understand project code (codebase comprehension) - no source		0	0
110019423806	P11	I was glad while I did a project from scratch using Chatgpt	project from scratch (scaffold)	GC-1	1	0
110019423107	P12	Asked how Cypress internally works, and it made non useful response, then ordered it to read the open source code, then it searched the net and found two useful pages describing the correct needed answer	Found correct resources on Cypress internals when search failed.	GC-2	0	1
110019411831	P13	This case Google failed to answer correctly. Surprisingly, it is great for a quick code review and catching mistakes that are valid code.	quick code review / catch mistakes (procedural QA)	GC-1	1	0
110019408832	P14	Once, I needed a one-time script to perform some simple bulk operations against an API. After describing the API and the desired behaviour of the script, ChatGPT outputted a script that, with only minor tweaks, did exactly what I needed it to.	One-off API script generated; minor tweaks only.	GC-1	1	0
110019407538	P15	I have not used chatgpt for code generation.			0	0
110019406801	P16	Generate unit tests	generate unit tests	GC-1	1	0
110019399151	P17	when it told me about a library i didn't know existed	surfaced unknown library	GC-2	0	1
110019398111	P18	Generate a complex SQL query with joint, select, json values	complex SQL query generation	gc-1	1	0
110019397914	P19	Ability to quickly modify existing code to resolve issues while firing with a client allowing for immediate feedback.	quick modify existing code for immediate feedback	GC-1	1	0
110019397543	P20	generating network reader and network writer classes where the functions were all nearly identical and I didn't want to spend an hour copy and pasting and renaming the methods multiple times.	repetitive reader/writer classes (avoid copy-paste)	GC-1	1	0
110019397532	P21	scaffolding a greenfield project. it was much faster than doing it myself.	greenfield scaffolding	GC-1	1	0
110019395380	P22	Yes, I started using Cursor in February and I haven't written any code since then. It's really allowed me to expand my thinking when I'm developing. I can focus on refining the macro-level stuff and much more of it and allow the agent to turn that vision into code.	Not about ChatGPT		0	0
110019396235	P23	Yes, in particular with css styling tasks and with targeted refactors.	CSS/styling and targeted refactors handled quickly.	GC-1	1	0
110019395348	P25	Right now I had to find a "greedy client" based on some db data. asked LLM to define the greediness based on factors seen in db and then write a query to do it. easy to do by this was MUCH faster	Defined metric & wrote query; much faster than manual.	GC-1	1	0
110019395223	P27	Short snippets for interfaces	short interface snippets	GC-1	1	0
110019394986	P28	Every time I find solution. Ok, to be specific, I'm new to python, so some errors might be obvious for someone used to python, but I post it to ChatGPT, it tells me - oh yes, that's because I can use that, ask for why specifically, it teaches me why, I ask what's negatives and positives, what's the practice and hopefully next time not do it again, repeat what was wrong and learn from it.	new to Python; explanations + practices	GC-2	0	1
110019395125	P29	Yes, when fixing a bug in code that I was unfamiliar with and where the solution was decently understand but needed a bunch of typing and some careful thought about the details.	Bug fix in unfamiliar code; AI handled tedious typing.	GC-2	0	1
110019395016	P30	All the time. I don't manually write probably 90% of my code anymore - I closely supervise and guide agents instead	Not ChatGPT		0	0
110019390040	P31	When I didn't have a clue on how to get started with an unfamiliar technology in an unfamiliar language, and I hadn't been able to find a "getting started" tutorial	getting started in unfamiliar tech & language	GC-2	0	1
110019383854	P32	I encountered a common problem where an update to my MacBook's OSX broke the mounting of my Nix partition and some bindings. The solution is simple, but very arcane since it requires using a lot of rarely-used CLI tools with long commands and flags and such. But because it was a common issue and I had all the required domain knowledge, I knew that I could guide AI to the correct solution without needing to re-learn the technical knowledge required. Saving me a lot of time and stress	Generated arcane CLI steps; saved time and stress.	GC-1	1	0
110019382325	P33	Simple functions, e.g. write a quicksort.	simple functions (e.g., quicksort)	GC-1	1	0

110019380610	P35	Most of the time, from solving things I didn't want to bother with (scraping script for instagram, it autogenerated that though it took 2+ hours) to it being capable of instantly understanding and adapting to my, unfortunately unique programming philosophy: functions not longer than screen, files not longer than 100 lines, though lately, it's 50. That's all you need, every other programming pattern is just a more advanced version of this, tailed to particular problem sets, this one is the only universal one. But i'm the only person in the world using it.	Automates tedious scripts; adapts to personal style.	GC-1	1	0
110019378988	P36	Hence we go to the root of hte problem again: don't blame the tool. Blame the cobler, not the hammer. Frequently. In unfamiliar code bases when learning patterns, ChatGPT gets me to the 60% mark really quickly. ChatGPT is also amazing at repetitive, well-defined tasks like writing tests.	unfamiliar codebase → "60% mark" fast (also mentions tests)	GC-2	0	1
110019376658	P40	I'm glad of a financial agents platform that I developed from zero, that I used "vibe coding" for 80% of the project. It made the GTM so fast.	"Vibe coding" built most of a platform; faster GTM.	GC-1	1	0
110019375841	P41	the first 6 months or so using it it was very helpful for me learning react. after I learned enough react, it became more of a burden to continue using.	learning React (early ramp-up helpful)	GC-2	0	1
110019375009	P42	It finds niche information decently. For example, using a curl convention to automate my uv auth token refresh from CodeArtifact. Another example, helping suggest various spark driver settings for me to read more about, as relates to my problem. Also very useful for locating something that's tough to grep for in a large codebase	Surfaces niche info and settings; aids discovery in large repos.niche info: curl auth + Spark settings; locate hard-to-grep items	GC-2	0	1
110019374848	P43	Yes. I've used it to brainstorm things and it often produces a better result than I might have come up with myself. It's most useful for small toy projects.			0	0
110019374411	P44	I asked it to write a Java snippet to run a subprocess capturing stdout/stderr with error checking. It handled the nuances of asynchronously reading stdout/stderr to prevent deadlocks, checking exit codes, timeouts and shutting down its background executor well without being told.	Correct, nuanced subprocess handling (deadlocks/timeouts).	GC-1	1	0
110019374153	P47	Several times daily. I use it as I would a pair programming scenario.			0	0
110019373745	P52	I was writing something in an unfamiliar language. Although it was often frustrating working with chatgpt, I eventually did get something to work which I don't think I could have done on my own.	unfamiliar language; eventually succeeded	GC-2	0	1
110019373698	P53	I had to run a scale test of ~50 requests per second on an internal API. I asked it for an off the shelf solution and within minutes I had a full Python script, with configurable options I needed. It was especially useful since it did the job and could then be "thrown away" rather than needing to be maintained	Generated load-test script quickly; throwaway fit the need.	GC-1	1	0
110019373505	P55	LLMs have been suitable for generating code for common algorithms that are widespread/common.	Reliable for widespread/common algorithms.	GC-1	1	0
110019372009	P56	I usually do not use chatgpt for solving any issue.			0	0
110019370799	P57	Using GPT for unit tests is actually pretty good, it can add test coverage to a codebase that managers/leaders won't always allow the time for developers to do "the slow way". I also like it for documentation, even if I end up editing the whole thing I am much faster when I have a starting point.	Adds test coverage and doc drafts; faster with a starting point.	GC-1	1	0
110019370134	P58	Brainstorming session			0	0
110019367335	P59	ChatGPT is amazing for experimentation and building new POCs	Accelerates experiments and POCs.	GC-1	1	0
110019365016	P61	Yes, ChatGPT helped generate a basic Vector pipeline so I could scrape metrics from kubernetes and kube-state-metrics. That was enough to get me started.	Vector pipeline scaffolded; got started scraping k8s metrics.	GC-1	1	0
110019362616	P62	I have never used ChatGPT, so no.			0	0
110019363194	P63	When using an unfamiliar language, it is great to help with syntax.	syntax help in unfamiliar language	GC-2	0	1
110019363180	P64	When I try to setup docker file and some startup snippets, it generates code of very high quality that only needs small adjustments.	High-quality Docker/startup snippets; minor edits needed.	GC-1	1	0
110019362923	P65	I am stuck on the domain knowledge, and get things cleared out by gpt.	stuck on domain knowledge; clarified by GPT	GC-2	0	1
110019360136	P66	ChatGPT fully spat out a class that solved a complicated serialization issue for work.	Full class solved tricky serialization.	GC-1	1	0
110019352947	P71	I usually use it and happy that I am using it when I forget syntax and was a quick example of doing sth or when I am implementing something that I never implemented before and I want to learn about best practices.	syntax recall + best practices / new implementation	GC-2	0	1
					24	15
